Instructions
Ram and Shyam run a race between points $A$ and B, 5 km apart. Ram starts at 9 a.m. from A at a speed of $5 \mathrm{~km} / \mathrm{hr}$, reaches $B$, and returns to $A$ at the same speed. Shyam starts at 9:45 a.m. from A at a speed of $10 \mathrm{~km} / \mathrm{hr}$, reaches $B$ and comes back to $A$ at the same speed.

## Q. 1

At what time do Ram and Shyam first meet each other?
(a) 10 a.m.
(b) 10:10 a.m.
(c) 10:20 a.m.
(d) 10:30 a.m.

Ans: b

## Explanation:

Let the time at which they meet be t minutes past 10 .
So, distance run by Ram + distance run by Shyam $=10 \mathrm{~km}$
$=>(60+t) 5 / 60\left[t+60\right.$ because he would have traveled for 9 am to ${ }^{\circ} 10 \mathrm{am}$ and t minutes more before meeting Shyam $]+(15+\mathrm{t}) * 10 / 60[15+\mathrm{t}$ because he would have traveled from 9:45 to 10:00 and t minutes more] $=10$
$=>300+5 \mathrm{t}+150+10 \mathrm{t}=600=>\mathrm{t}=10$
So, they meet at 10.10 am

## Q. 2

At what time does Shyam overtake Ram?
(a) 10:20 a.m.
(b) 10:30 a.m.
(c) 10:40 a.m.
(d) 10:50 a.m.

Ans: b
Explanation:
Let the time at which Shyam overtakes Ram be $t$ minutes past 10 . So, distance run by both of them is the same till that moment. $(60+t) 5=(15+t) 10 \geq 300+5 t=150+10 t \geq 5 t=150$
$\geq \mathrm{t}=30 \mathrm{~min}$. So, at 10.30 am , Shyam overtakes Ram
Instructions
For the following Questions answer them individually

## Q. 3

If $R=\left(30^{65}-29^{65}\right) /\left(30^{64}+29^{64}\right)$, then
(a) $0<\mathrm{R} \leq 0.1$
(b) $0.1<\mathrm{R} \leq 0.5$
(c) $0.5<\mathrm{R} \leq 1.0$
(d) $\mathrm{R}>1.0$

Ans: d
Explanation:
$\frac{\left(30^{65}-29^{65}\right)}{\left(30^{64}+29^{64}\right)}=(30-29) * \frac{\left(30^{64}+30^{63} * 29+\ldots 29^{64}\right)}{\left(30^{64}+29^{64}\right)}$
Which is greater than 1 . Hence option D.

## Q. 4

What is the distance in cm between two parallel chords of lengths 32 cm and 24 cm in a circle of radius 20 cm ?
(a) 1 or 7
(b) 2 or 14
(c) 3 or 21
(d) 4 or 28

Ans: d

Explanation:

If the chords lie on the same side of the center, the distance between the chords is 4 cm , if they lie on opposite sides of the center, the distance between them is 28 cm .

## Q. 5

For which value of k does the following pair of equations yield a unique solution for x such that the solution is positive?

$$
\begin{aligned}
& x^{2}-y^{2}=0 \\
& (x-\mathrm{k})^{2}+y^{2}=1
\end{aligned}
$$

(a) 2
(b) 0
(c) $\sqrt{2}$
(d) $-2 \sqrt{2}$

Ans: c
Explanation:
From 1 st equation we know that $(x)^{2}=y^{2}$
Substituting this in 2nd equation. we get, $2 * x^{2}-2 * x * \mathrm{k}+\mathrm{k}_{2}-1=0$ and for unique solution $b^{2}-4 a c=0$ must satisfy.
This is possible only when $\mathrm{k}=\sqrt{2}$

## Q. 6

If $x=\left(16^{3}+17^{3}+18^{3}+19^{3}\right)$, then x divided by 70 leaves aremainder of
A(a) 0
(b) 1
(c) 69
(d) 35

Ans. a

Explanation:
We know that $x=16^{3}+17^{3}+18^{3}+19^{3}=\left(16^{3}+19^{3}\right)+\left(17^{3}+18^{3}\right)$
$=(16+19)\left(16^{2}-16 * 19+19^{2}\right)+(17+18)\left(17^{2}-17 * 18+18^{2}\right)=35 \times$ odd $+35 \times$ odd $=35 \times$ even $=35 \times(2 \mathrm{k})$
$=>x=70 \mathrm{k}$
$=>$ Remainder when divided by 70 is 0 .
Q. 7

A chemical plant has four tanks (A, B, C, and D), each containing 1000 litres of a chemical. The chemical is being pumped from one tank to another as follows :
From A to B @ 20 litres/minute From C to A @ 90 litres/minute From A to D @ 10 litres/minute

From C to D @ 50 litres/minute From B to C @ 100 litres/minute From D to B @ 110 litres/minute
Which tank gets emptied first, and how long does it take (in minutes) to get empty after pumping starts?
(a) $\mathrm{A}, 16.66$
(b) C,20
(c) $\mathrm{D}, 20$
(d) D,25

Ans:c

## Explanation:

After 1 min the cans will contain following amount of chemicals : A-1060 B-1030 C-970 D-950
So, we can see that the can D loses 50 ltrs in 1 min which is highest. So the can D will lose 1000 ltrs in $20 * 1=20$ mins.

## Q. 8

Two identical circles intersect so that their centres, and the points at which they intersect, form a square of side 1 cm . The area in sq. cm of the portion that is common to the two circles is
(a) $\pi / 4$
(b) $\pi / 2-1$
(c) $\pi / 5$
(d) $\sqrt{\pi}-1$

Ans: b

Explanation:

We know that quad pmqn is a square of side 1 .
Area of the sector p-mqn is $\frac{90}{360} * 1 * 1 \frac{\pi}{4}$.
Area of square $=1 * 1=1$
Area of common portion $=2$ * Area of sector - Area of square
$=2 * \frac{\pi}{4}-1 \frac{\pi}{2}-1$

## Q. 9

A jogging park has two identical circular tracks touching each other, and a rectangular track enclosing the two circles. The edges of the rectangles are tangential to the circles. Two friends, A and B, start jogging simultaneously from the point where one of the circular tracks touches the smaller side of the rectangular track. A jogs along the rectangular track, while B jogs along the two circular tracks in a figure of eight. Approximately, how much faster than A does B have to run, so that they take the same time to return to their starting point?
(a) $3.88 \%$
(b) $4.22 \%$
(c) $4.34 \%$
(d) $4.46 \%$

Ans: d

Explanation:

Let the radius of 2 circles be $r$. Speed of A would be $12 r / t$ and Speed of $B$ would be $4 * \operatorname{Pi} * r / t$. To find percentage faster $B$ have to run than
A we have : $4 * \operatorname{Pi}-12 * 100 /(4 * \mathrm{Pi})=4.46 \%$ approx. Hence, option D.

## Q. 10

In a chess competition involving some boys and girls of a school, every student had to play exactly one game with every other student. It was found that in 45 games both the players were girls, and in 190 games both were boys. The number of games in which one player was a boy and the other was a girl is
(a) 200
(b) 216
(c) 235
(d) 256

Ans: a

Explanation:
Number of games in which both the players are girls $={ }^{G} \mathrm{C}_{2}$ where G is the number of girls
${ }^{\mathrm{G}} \mathrm{C}_{2}=45$
${ }^{10} \mathrm{C}_{2}=45$
So, $G=10$
Similarly, number of games in which both the players are boys $={ }^{B} C_{2}$, where $B$ is the number of boys
${ }^{\mathrm{B}} \mathrm{C}_{2}=190$
${ }^{20} \mathrm{C}_{2}=190$
So, B=20
So, number of games in which one player is a boy and the other player is a girl is $20 * 10=200$

## Q. 11

Let $\mathrm{n}!=1 * 2 * 3 * \ldots *$ n for integern $\geq 1$.
If $\mathrm{p}=1!+(2 * 2!)+(3 * 3!)+\ldots+(10 * 10$ ! $)$, then $\mathrm{p}+2$ when divided by 11 ! leaves a remainder of
(a) 10
(b) 0
(c) 7
(d) 1

Ans: d
Explanation:
According to given condition we have $p=(1 \times 1!)+(2 \times 2!)+(3 \times 3!)+(4 \times 4!)+\ldots+(10 \times 10!)$.
So $\mathrm{n} \times \mathrm{n}!=[(n+1)-1] \times n!=(n+1)!-n!$.
So equation becomes $\mathrm{p}=2!-1!+3!-2!+4!-3!+5!-4!+\ldots+11!-10$ !.
So $p=2!-1!+3!-2!+4!-3!+5!-4!+\ldots+11!-10!$. So $p=11!-1!=11!-1 p+2=11!+1$
So when it is divided by 11 gives a remainder of 1 . Hence, option 4.

## Q. 12

Consider a triangle drawn on the $\mathrm{X}-\mathrm{Y}$ plane with its three vertices at $(41,0),(0,41)$ and $(0,0)$, each vertex being represented by its ( $\mathrm{X}, \mathrm{Y}$ ) coordinates. The number of points with integer coordinates inside the triangle (excluding all the points on the boundary) is
(a) 780
(b) 800
(c) 820
(d) 741

Ans: a

Explanation:
The number of points on $x=1$ is 39 . The number of points on $x=2$ is 38 and so on till $x=39$, which
has one point.
So, the total is $1+2+3+\ldots .+39=\frac{39 * 40}{2}=780$

## Q. 13

The digits of a three-digit number A are written in the reverse order to form another three-digit number $B$. If $B>A$ and $B-A$ is perfectly divisible by 7 , then which of the following is necessarily true?
(a) $100<\mathrm{A}<299$
(b) $106<\mathrm{A}<305$
(c) $112<\mathrm{A}<311$
(d) $118<\mathrm{A}<317$

Ans: b

## Explanation:

Let $\mathrm{A}=100 x+10 y+$ zand $\mathrm{B}=100 \mathrm{z}+10 \mathrm{y}+x$. According to given condition $\mathrm{B}-\mathrm{A}=99(z-x)$ As $(B-A)$ is divisible by 7 . So clearly $(z-x)$ should be divisible by 7 . $z$ and $x$ can have values 8,1 or 9,2 , such that $8-2=9-2=7$ and $y$ can have value from 0 to 9 . So Lowest possible value of $A$ lowest $x, y$ and z which is is 108 and the highest possible value of A is 299 .

## Q. 14

If $a_{1}=1$ and $a_{n+1}-3 a_{n}+2=4 n$ for every positive integer $n$, then $a_{100}$ equals
(a) $3^{99}-200$
(b) $3^{99}+200$
(c) $3^{100}-200$
(d) $3^{100}+200$

Ans:c
Explanation:
Using given condition we find $a_{2}=5$ and $a_{3}=21$ and so on.
We see that the numbers are of form $3^{\mathrm{n}}-(2 * \mathrm{n})$
So for 100 we have $3^{100}-200$

## Q. 15

Let $S$ be the set of five-digit numbers formed by the digits $1,2,3,4$ and 5 , using each digit exactly once such that exactly two odd positions are occupied by odd digits. What is the sum of the digits in the rightmost position of the numbers in $S$ ?
(a) 228
(b) 216
(c) 294
(d) 192

Ans: b

## Explanation:

When the odd numbers occupy places 1 and 3 , only 2 or 4 can be in the 5 th place. Odd numbers can occupy places 1 and 3 in ${ }^{3} \mathrm{C}_{2} * 2!=6$ ways. When 2 is at the 5 th place, the other odd number and 4 can be arranged in the remaining places in 2 ways. So, 2 occurs at the end
$6 * 2=12$ times. Similarly, 4 occurs 12 times.
If odd numbers occupy places 1 and 5 , then 2 or 4 should come in the 3 rd place. The other two numbers can then be arranged in 2 ways in the remaining blanks. So, if 1 is in the first place and 5 is in the 5th place, the other numbers can be arranged in $2 * 2=4$ ways. Similar for 1 and $3 ; 5$ and $1 ; 3$ and $1 ; 5$ and $3 ; 3$ and 5 . So, 5 occurs 8 tímes, 18 times and 38 times. Similar is the case when odd numbers are placed in 3rd and 5th places.

On the whole, 4 occurs 12 times, 2 occurs 12 times, 5,3 and 1 each occur 16 times. The total is, therefore, $48+24+80+48+16=216$
Q. 16

The rightmost non-zero digit of the number $30^{2720}$ is
(a) 1
(b) 3
(c) 7
(d) 9

Ans: a

Explanation:
Rightmost non-zero digit of $30^{2720}$ is same as rightmost non-zero digit of $3^{272}$.
272 is of the form 4 k .
All $3^{4 k}$ end in 1.
$=>$ Right most non-zero digit is 1 .
Q. 17

Four points $A, B, C$, and $D$ lie on a straight line in the $X-Y$ plane, such that $A B=B C=C D$, and the length of $A B$ is 1 metre. An ant at $A$ wants to reach a sugar particle at $D$. But there are insect repellents kept at points B and C. The ant would not go within one metre of any insect repellent. The minimum distance in metres the ant must traverse to reach the sugar particle is
(a) $3 \sqrt{2}$
(b) $1+\pi$
(c) $4 \pi / 3$
(d) 5

Ans: b
Explanation:
Since ant cant go more near than 1 m .
So it'll have to travel in circular path from A till it is south of pt .
$B$ and hence travels a quarter circle with radius $=1$ and center as B, so travel $\frac{\pi}{2} \mathrm{~m}$ distance.

Then from B to C it travels 1 m in straight line till C.
Then again from $C$ to $D$ in circular path way with distance $\frac{\pi}{2} \mathrm{~m}$.
Hence total distance traveled $\frac{\pi}{2}+\frac{\pi}{2}+1=\pi+1$

Alternate solution :
Let the given figure represent the situation. $A, B, C, D$ are the points with distance between them 1 m.

The repellents are at $B$ and $C$ respectively. The circles drawn with centre at $B$ and $C$ and radius equal to $A B=1 \mathrm{~m}$.

Let $E$ and $F$ be the points of intersection of the circles and $G$ and $H$ be the points on the circle perpendicular to $B$ and $C$.

Therefore, the ant can only travel at the circumference of the circles. The shortest path for the to take will take is :A-G-H-D.

This is because taking the curve G-E and E-H will be a longer path than travelling straight from G to H . While travelling from G to H , the distance of the ant will be more than 1 m from the repellant.

Thus, the distance travelled by the ant on the circumference of the circle ie arc $\mathrm{AG}=\frac{90}{360} \times 2 \times \pi \times l=\frac{\pi}{2}$
Length of $\operatorname{arc} \mathrm{HD}=$ length of $\operatorname{arc} \mathrm{AG}=\frac{\pi}{2}$
Total length $=\left(2 \times \frac{\pi}{2}\right)+\mathrm{BC}=\pi+1$

## Q. 18

If $\mathrm{x}>=\mathrm{y}$ and $\mathrm{y}>1$, then the value of the expression $\log x(x / y)+\log \mathrm{y}(\mathrm{y} / \mathrm{x})$ can never be
(a) -1
(b) -0.5
(c) 0
(d) 1

Ans: d

Explanation:
$\log _{x}(x / y)+\log _{y}(y / x)=1-\log _{x}(y)+1-\log _{y}(x)$
$=2-\left(\log _{x} y+1 / \log _{x} y\right) \leq\left(\right.$ Since $\left.\log _{x} y+1 / \log _{x} y \geq 2\right)$ So, the value of the expression cannot be 1 .

## Q. 19

For a positive integer $n$, let $P_{n}$ denote the product of the digits of $n$, and $S_{n}$ denote the sum of the digits of n . The number of digit of n . The number of Integers between 10 and 1000 for which $\mathrm{P}_{\mathrm{n}}+\mathrm{S}_{\mathrm{n}}=\mathrm{n}$ is
(a) 81
(b) 16
(c) 18
(d) 9

Ans: d
Explanation:
Let n can be a 2 digit or a 3 digit number.
First let n be a 2 digit number.
So $\mathrm{n}=10 x+y$ and $\mathrm{P}_{\mathrm{n}}=x y$ and $\mathrm{S}_{\mathrm{n}}=x+y$
Now, $\mathrm{P}_{\mathrm{n}}+\mathrm{S}_{\mathrm{n}}=\mathrm{n}$
Therefore, $x y+x+y=10 x+y$, we have $\mathrm{y}=9$.
Hence there are 9 numbers $19,29, . ., 99$, so 9 cases .
Now if n is a 3 digit number.
Let $\mathrm{n}=100 x+10 y+z$
So $\mathrm{P}_{\mathrm{n}}=x y z$ and $\mathrm{S}_{\mathrm{n}}=x+y+z$
Now, for $\mathrm{P}_{\mathrm{n}}+\mathrm{S}_{\mathrm{n}}=\mathrm{n} ; x y z+x+y+z=100 x+10 y+z$; so. $x y z=99 x+9 \rightsquigarrow$.
For above equation there is no value for which the above equation have an integer (single digit) value. Hence option D.

## Q. 20

Rectangular tiles each of size 70 cm by 30 cm must be laid horizontally on a rectangular floor of size 110 cm by 130 cm , such that the tiles do not overlap. A tile can be placed in any orientation so long as its edges are parallel to the edges of the floor. No tile should overshoot any edge of the floor. The maximum number of tiles that can be accommodated on the floor is
(a) 4
(b) 5
(c) 6
(d) 7

Ans:c

Explanation:

As seen from the fig. If following configuration is used max 6 number of tiles that can be accommodated on the floor.

## Q. 21

In the X-Y plane, the area of the region bounded by the graph of $|x+y|+|x-y|=4$ is
(a) 8
(b) 12
(c) 16
(d) 20

Ans:c
Explanation:
If the moduli are removed, the equations formed are $x+y+x-y=4 \geq x=2$
$x+y-x+y=4 \geq y=2$
$-x-y+x-y=4 \geq y=-2$
$-x-y-x+y=4 \geq x=-2$
The area enclosed by these equations is a square with vertices at $(2,2),(-2,2),(-2,-2),(2,-2)$ as shown in figure.

The required area $=4 * 4=16$

## Q. 22

In the following figure, the diameter of the circle is 3 cm . AB and MN are two diameters such that $M N$ is perpendicular to $A B$. In addition, $C G$ is perpendicular to $A B$ such that $A E: E B=1: 2$, and $D F$ is perpendicular to $M N$ such that $N L: L M=1: 2$. The length of $D H$ in cm is

A(a) $2 \sqrt{2}-1$
(b) $(2 \sqrt{2}-1) / 2$
(c) $(3 \sqrt{2}-1) / 2$
(d) $(2 \sqrt{2}-1) / 3$

Ans: b

Explanation:
Let $\mathrm{EO}=x$, $\mathrm{So}, \mathrm{AE}=1.5-x$
$\mathrm{AE}: \mathrm{EB}=1: 2 \geq x=1 / 2$
$(1.5-x):(1.5+x)=1: 2$.
$x=0.5$.
So, $\mathrm{EO}=0.5$
Similarly, OL $=0.5$
Now, EOLH is a parallelogram and $\mathrm{EO}=0 \mathrm{~L}=0.5$
In triangle DOL, $\mathrm{DO}=$ radius $=1.5$ and $\mathrm{OL}=0.5$
So, DL $=\sqrt{2}$
$\geq \mathrm{DH}=(2 \sqrt{2}-1) / 2$
Q. 23

Consider the triangle ABC shown in the following figure where $\mathrm{BC}=12 \mathrm{~cm}, \mathrm{DB}=9 \mathrm{~cm}, \mathrm{CD}=6$ and $\angle \mathrm{BCD}=\angle \mathrm{BAC}$
What is the ratio of the perimeter of the triangle ADC to that of the triangle $\operatorname{BDC}$ ?

(a) $7 / 9$
(b) $8 / 9$
(c) $6 / 9$
(d) $5 / 9$

Ans: a

Explanation :
Consider triangles ABC and BDC
Angle B is common in both triangles. Also $\angle \mathrm{A}=\angle \mathrm{C}$
Since 2 angles are equal, the third angles $\angle \mathrm{ACB}=\angle \mathrm{BDC}$
Hence, triangle $\mathrm{BCA} \sim \mathrm{BDC}$ (BCA and BDC are similar)
$\mathrm{AC} / \mathrm{DC}=\mathrm{BC} / \mathrm{BD}=\mathrm{AB} / \mathrm{BC}$

## Q. 24

$P, Q, S$, and $R$ are points on the circumference of a circle of radius $r$, such that $P Q R$ is an equilateral triangle and PS is a diameter of the circle. What is the perimeter of the quadrilateral PQSR?
(a) $2 \mathrm{r}(1+\sqrt{3})$
(b) $2 \mathrm{r}(2+\sqrt{3})$
(c) $\mathrm{r}(1+\sqrt{5})$
(d) $2 \mathrm{r}+\sqrt{3}$

Ans: a

Explanation:

Let $P Q R$ be an equilateral triangle with side equal to $x$ and let the intersection point ofPS and QR be M . Clearly, the circle is the circumcircle of the triangle $P Q R$.
$\mathrm{QR}=\mathrm{x}=>\mathrm{QM}=\frac{x}{2}$ because a perpendicular from the centre to any chord bisects the chord.
Angle $\mathrm{OQM}=30$ degrees and QM is equal to $\frac{x}{2} \geq \mathrm{OQ}=\cos \frac{x}{2}(30)=\left(\frac{x}{\sqrt{3}}\right.$
Hence the radius of the circumcircle of an equilateral triangle is equal to $\frac{x}{\sqrt{3}}$.
Angle PQS $=90$ degrees as it is an angle in a semicircle. PS bisects angle $\mathrm{QPR} \geq$ angle QPS is 30 degrees. Hence QS subtends an angle of 30 degrees in the major arc $\geq$ QS subtends an angle of 60 degrees at the centre because angle subtended by a chord at the centre is twice the angle subtended by the chord in the major arc.
Angle QOS $=60$ degrees $\geq$ Triangle QOS is equilateral and hence QS is equal to radius of the circle $=>\mathrm{QS}=\frac{x}{\sqrt{3}}$

Given that radius is $\mathrm{r} \geq \mathrm{r}=\frac{x}{\sqrt{3}} \geq x=\mathrm{r} \sqrt{3}$
$=>$ Perimeter of $\mathrm{PQRS}=\mathrm{PQ}+\mathrm{QS}+\mathrm{SR}+\mathrm{RP}=\mathrm{r} \sqrt{3}+\mathrm{r}+\mathrm{r}+\mathrm{r} \sqrt{3}=2 \mathrm{r}(1+\sqrt{3})$

## Q. 25

Let $S$ be a set of positive integers such that every element $n$ of $S$ satisfies the conditions
A. $1000 \leq \mathrm{n} \leq 1200$
B. every digit in n is odd

Then how many elements of $S$ are divisible by 3 ?
(a) 9
(b) 10
(c) 11
(d) 12

Ans: A

Explanation:

The no. has all the digits as odd no. and is divisible by 3. So the possibilities are 1113
1119
1131
1137
1155
1173
1179
1191
1197
Hence 9 possibilities.

## Q. 26

Let $x=\sqrt{4+\sqrt{4-\sqrt{4+\sqrt{4-\text { infinity }}}}}$. Then x equals
(a) 3
(b) $(\sqrt{13}-1) / 2$
(c) $(\sqrt{13}+1) / 2$
(d) $\sqrt{13}$

Explanation:
$x=\sqrt{4+\sqrt{4-\sqrt{4+\sqrt{4-\text { infinity }}}}}$
$\geq x=\sqrt{4+\sqrt{4-x}}$
$\geq x^{2}=4+\sqrt{4-x}$
$\geq x^{4}+16-8 x^{2}=4-x$
$\geq x^{4}-8 x^{2}+x+12=0$
On substituting options, we can see that option C satisfies the equation.

## Q. 27

Let $\mathrm{g}(\mathrm{x})$ be a function such that $g(x+1)+g(x-1)=g(x)$ for every real x . Then for what value of p is the relation $\mathrm{g}(x+p)=g(x)$ necessarily true for every real x ?
(a) 5
(b) 3
(c) 2
(d) 6

Ans: d
Explanation:
According to given condition we have, $g(x+1)=-g(x-1)+g(x)$
Putting $x=x+1$ we get $g(x+2)=g(x+1)-g(x)=-g(x-1)$
Putting $x=x+2$ we get $g(x+3)=-g(x)$
Similarly
$g(x+4)=-g(x+1), g(x+5)=-g(x+2)=-g(x+1)+g(x)$ and $g(x+6)=g(x+1)-g(x+2)=g(x)$.

So $p=6$.

## Q. 28

A telecom service provider engages male and female operators for answering 1000 calls per day. A male operator can handle 40 calls per day whereas a female operator can handle 50 calls per day. The male and the female operators get a fixed wage of Rs. 250 and Rs. 300 per day respectively. In addition, a male operator gets Rs. 15 per call he answers and a female operator gets Rs. 10 per call she answers. To minimize the total cost, how many male operators should the service provider employ assuming he has to employ more than 7 of the 12 female operators available for the job?
(a) 15
(b) 14
(c) 12
(d) 10

Ans: d

Explanation:
Let $x$ be no. of male and $y$ be no. of female operators.
We have $40 x+50 y=1000$.
So $x=25-(5 * y / 4)$ also $7 \leq y \leq 12$.
So $y$ can be 8 or 12 .
If $\mathrm{y}=8$ then $x=15$ and $y=12$ then $x=10$.
Then we have to find total cost incurred in both the cases.
We find that cost is minimum in 2nd case when no. of males are 10.
Q. 29

Three Englishmen and three Frenchmen work for the same company. Each of them knows a secret not known to others. They need to exchange these secrets over person-to-person phone calls so that eventually each person knows all six secrets. None of the Frenchmen knows English, and only one Englishman knows French. What is the minimum number of phone calls needed for the above purpose?
(a) 5
(b) 10
(c) 9
(d) 15

Ans: c

Explanation:
Consider there are 6 people numbered 1-3 englishmen and 3-6 frenchmen, let 3 know both english and french. First call would be between $1-3$ then $2-3$ such that 3 know secret of all 3 englishmen.
Let 3 call 4.
Similarly there would be call between $4-5$ then $4-6$ such that 4 know secret of all 3 frenchmen. Now

3 would call 4 . Such that 3 and 4 would know secret of all 6 members.
Now to let this know to $1,2,5,6$ more 4 calls would be required. Hence, minimum calls required would be 9 .
Q. 30

A rectangular floor is fully covered with square tiles of identical size. The tiles on the edges are white and the tiles in the interior are red. The number of white tiles is the same as the number of red tiles. A possible value of the number of tiles along one edge of the floor is
(a) 10
(b) 12
(c) 14
(d) 16

Ans: b

Explanation:
Let C and R be no. of columns and rows respectively.
The number of red coloured tiles would be given by $(\mathrm{R}-2)(\mathrm{C}-2)$. This is because two outer rows made of white tiles and the two outer columns made up of outer columns are removed.
Similarly the number of white tiles would be given by $\mathrm{R} * 2+(C-2) * 2$. Two tiles are removed from columns because the corner tiles would have already been included while considering the rows.
So according to given condition we have $(\mathrm{C}-2) * 2+2 * \mathrm{R}=(\mathrm{C}-2)(\mathrm{R}-2)$.
Now start putting value of c from options into this equation. Only for one option B we get an integer value of $R$.

Instructions

## Data Interpretation

A management institute was established on January 1, 2000 with $3,4,5$, and 6 faculty members in the Marketing, Organisational Behaviour (OB), Finance, and Operations Management (OM) areas respectively, to start with. No faculty member retired or joined the institute in the first three months of the year 2000. In the next four years, the institute recruited one faculty member in each of the four areas. All these new faculty members, who joined the institute subsequently over the years, were 25 years old at the time of their joining the institute. All of them joined the institute on April a) During these four years, one of the faculty members retired at the age of 60 . The following diagram gives the area-wise average age (in terms of number of completed years) of faculty members as on April 1 of 2000,
2001, 2002, and 2003.

Question 31

## From which area did the faculty member retire?

(a) Finance
(b) Marketing
(c) OB
(d) OM

Ans:a
Explanation:
We know that average of the particular area would increase by 1 each year if there is no change in any member of the group. So, now in marketing, oband om, we can see increase in average by 1 in 3 successive years.

But in Finance we see that average decreases 2 times, once when a new teacher is recruited and other time when the 60 year old retires. Hence option A.

## Q. 32

Professors Naresh and Devesh, two faculty members in the Marketing area, who have been with the Institute since its inception, share a birthday, which falls on 20th November. One was born in 1947 and the other one in 1950. On April 1 2005, what was the age of the third faculty member, who has been in the same area since inception?
(a) 47
(b) 50
(c) 51
(d) 52

Ans: d

Explanation:
Since one was born in 1947 and the other one in 1950 and have birthday on 20th November, on 1st April 2000 they will have age 49 and
52 respectively.
Average age of all three on 1st April $2000=49.33 \geq$ Total age $=49.33 * 3=148$
Hence, age of the third member on 1st April $2000=148-49-52=47$
Age of the third member on 1st April $2005=47+5=52$. Hence option D.
Q. 33

In which year did the new faculty member join the Finance area?
(a) 2000
(b) 2001
(c) 2002
(d) 2003

Ans: c
Explanation:
The average age in the Finance area dropped twice - once due to the retirement of a member and once due to the joining of a new member. We see that the average age of the faculty is around 4550. This number is closer to the retirement age of 60 than to the joining age of 25 . Hence, the new joining will produce a greater drop in average age than the retirement. Hence, the new faculty member must have joined in 2002 and the old faculty member must have retired in 2001. Hence option C.

## Q. 34

What was the age of the new faculty member, who joined the 0 M area, as on April 1, 2003?
(a) 25
(b) 26
(c) 27
(d) 28

Ans: c

Explanation:
As the average age for OM area decreases in 2001, we can infer that the new faculty member joined OM on 1st April 2001. As his age was 25 on that date, his age on 1st April 2003 would be $25+2=27$ years. Thus, the new faculty member would be 27 years old. Hence option C.

## Instructions

The table below reports annual statistics related to rice production in select states of India for a
particular year.

| State | Total Area (in millions) | \% of Area under <br> rice cultivation | Production (in <br> million tons) | Population (in <br> millions) |
| :---: | :---: | :---: | :---: | :---: |
| Himachal Pradesh | 6 | 20 | 1.2 | 6 |
| Kerala | 4 | 60 | 4.8 | 32 |
| Rajasthan | 34 | 20 | 6.8 | 56 |
| Bihar | 10 | 60 | 12 | 83 |
| Karnataka | 19 | 50 | 19 | 53 |
| Haryana | 4 | 80 | 19.2 | 21 |
| West Bengal | 9 | 80 | 21.6 | 80 |
| Gujarat | 20 | 60 | 24 | 51 |
| Punjab | 5 | 80 | 24 | 24 |
| Madhya Prade3h | 31 | 40 | 24.8 | 60 |
| Tamilnadu | 13 | 70 | 27.3 | 62 |
| Maharashtra | 31 | 50 | 48 | 97 |
| Uttar Pradesh | 24 | 70 | 67.2 | 166 |
| Andhra Pradesh | 28 | 80 | 112 | 76 |

Q. 35

Which two states account for the highest productivity of rice (tons produced per hectare of rice cultivation)?
(a) Haryana and Punjab
(b) Punjab and Andhra Pradesh
(c) Andhra Pradesh and Haryana
(d) Uttar Pradesh and Haryana

Ans: a

Explanation:
Calculating the tons produced per hectare of rice cultivation for different states , we get highest value for punjab and haryana, the ratio being above 5 for both. Hence option A.
Q. 36

How many states have a per capita production of rice (defined as total rice production divided by its population) greater than Gujarat?

A(a) 3
(b) 4
(c) 5
(d) 6

Ans: b

Explanation:
Only 4 states Haryana , Punjab , Maharashtra, Andhra Pradesh have a per capita production of rice greater than Gujarat. Hence option B.

## Q. 37

An intensive rice producing state is defined as one whose annual rice production per million of population is at least 400,000 tons. How many states are intensive rice producing states?
(a) 5
(b) 6
(c) 7
(d) 8

Ans: d

Explanation:
10 lakh ton $=1$ million ton. States whose annual rice production per million of population is at least 400,000 tons are Haryana , Gujarat, Punjab , Madhya pradesh, Tamil nadu, maharashtra, uttar pradesh,andhra pradesh. Hence 8 states.

## Instructions

The table below reports the gender, designation and age-group of the employees in an organization. It also provides information on their commitment to projects coming up in the months of January (Jan), February (Feb), March (Mar) and April (Apr), as well as their interest in attending workshops on: Business Opportunities (BO), Commynication Skills (CS), and EGovernance (EG).

| Serial <br> No. | Name | Gender | Designation | Age-Group | Committed to Projects During | Interested in Workshop on |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Anshul | M | Mgr | Y | Jan, Mar | CS, EG |
| 2 | Bushkant | M | Dir | 1 | Feb, Mar | BO, EG |
| 3 | Charu | F | Mgr | 1 | Jan, Feb | BO, CS |
| 4 | Dinesh | M | Exe | 0 | Jan, Apr | BO, CS, EG |
| 5 | Eashwaran | M | Dir | 0 | Feb, Apr | BO |
| 6 | Fatima | F | Mgr | Y | Jan, Mar | BO, CS |
| 7 | Gayatri | F | Exe | Y | Feb. Mar | EG |
| 8 | Hari | M | Mgr | 1 | Feb, Mar | BO, CS, EG |
| 9 | Indira | F | Dir | 0 | Feb. Apr | BO, EG |
| 10 | John | M | Dir | Y | Jan, Mar | BO |
| 11 | Kalindi | F | Exe | 1 | Jan, Apr | BO, CS, EG |
| 12 | Lavanya | F | Mgr | 0 | Feb. Apr | CS, EG |
| 13 | Mandeep | M | Mgr | 0 | Mar, Apr | BO, EG |
| 14 | Nandlal | M | Dir | 1 | Jan, Feb | BO, EG |
| 15 | Parul | F | Exe | Y | Feb, Apr | CS,EG |
| 16 | Rahul | M | Mgr | Y | Mar, Apr | CS, EG |
| 17 | Sunita | F | Dir | Y | Jan, Feb | BO, EG |
| 18 | Urvashi | F | Exe | 1 | Feb, Mar | EG |
| 19 | Yamini | F | Mgr | 0 | Mar, Apr | CS, EG |
| 20 | Zeena | F | Exe | Y | Jan, Mar | BO, CS, EG |

$M=$ Male, $F=$ Female; Exe=Executive, Mgr=Manager, Dir=Director; $\mathrm{Y}=$ Young, $\mathrm{I}=$ =In-between, $\mathrm{O}=$ Old
For each workshop, exactly four employees are to be sent, of which at least two should be Females and at least one should be Young. No employee can be sent to a workshop in which he/she is not interested in. An employee cannot attend the workshop on

Communication Skills, if he/she is committed to internal projects in the month of January; Business Opportunities, if he/she is committed to internal projects in the month of February; Egovernance, if he/she is committed to internal projects in the month of March.

## Q. 38

Assuming that Parul and Hari are attending the workshop on Communication Skills (CS), then which of the following employees can possibly attend the CS workshop?
(a) Rahul and Yamini
(b) Dinesh and Lavanya
(c) Anshul and Yamini
(d) Fatima and Zeena

Ans: a

Explanation:
Since we require atleast 2 women and 1 women is selected, other girl can be any one out of the yamini or lavanya. Now seeing the options and given data, we can infer that dinesh and anshul cannot attend as they have projects in january and rahul can attend it. So we have rahul and yamini. Hence option A.

How many Executives (Exe) cannot attend more than one workshop?
(a) 2
(b) 3
(c) 15
(d) 16

Ans: b

Explanation:
Gayatri and Urvashi are interested in only one workshop each, that is, EG. So they cannot attend more than one workshop.
Zeena is interested in all three workshops but she is committed to internal projects during the months of Jan and Mar. So she cannot attend the CS and EG workshops.
These are 3 executives gayatri, urvashi, zeena who can't attend more than 1 workshop.
Similarly using the same above logic we find that Anshul, Bushkant, Charu, Eshwaran, Fatima, Hari, Indiri, John, Mandeep, Nandlal, Rahul, Sunita and Yamini cannot also attend more than one workshop.
So, in total there are only 3 executives who cannot attent more than one workshop.
Q. 40

Which set of employees cannot attend any of the workshops?
(a) Anshul, Charu, Eashwaran and Lavanya
(b) Anshul, Bushkant, Gayatri, and Urvashi
(c) Charu, Urvashi, Bushkant and Mandeep
(d) Anshul, Gayatri, Eashwaran and Mandeep

Ans: b
Explanation:
The common interest of all the people in option B is EG.
But, all the four are committed to projects in March $\geq$ They cannot attend EG.
Hence, people in option 4 cannot attend a workshop.
Instructions
In the table below is the listing of players, seeded from highest (\#1) to lowest (\#32), who are due to play in an Association of Tennis Players (ATP) tournament for women. This tournament has four knockout rounds before the final, i.e., first round, second round, quarterfinals, and semifinals. In the first round, the highest seeded player plays the lowest seeded player (seed \# 32) which is designated match No. 1 of first round; the 2nd seeded player plays the 31 st seeded player which is designated match No. 2 of the first round, and so on. Thus, for instance, match

No. 16 of first round is to be played between 16th seeded player and the 17th seeded player.
In the second round, the winner of match No. 1 of first round plays the winner of match No. 16 of first round and is designated match No.
1 of second round. Similarly, the winner of match No. 2 of first round plays the winner of match
No. 15 of first round, and is designated match No. 2 of second round. Thus, for instance, match
No. 8 of the second round is to be played between the winner of match No. 8 of first round and the winner of match No. 9 of first round. The same pattern is followed for later rounds as well.

| Seed \# | Name of Player |
| :---: | :---: |
| 1. | Maria Sharapova |
| 2. | Lindsay Davenport |
| 3. | Amelie Mauresmo |
| 4. | Kim Clijesters |
| 5. | Svetana Kuznetsova |
| 6. | Elena Dementieva |
| 7. | Justine Henin |
| 8. | Serena Williams |
| 9. | Nadia Petrova |
| 10. | Venus Williams |
| 11. | Patty Schnyder |
| 12. | Mary Pierce |
| 13. | Anastasia Myskina |
| 14. | Alicia Molik |
| 15. | Nathalie Dechy |
| 16. | Elena Bovina |
| 17. | Jelena Jankovic |
| 18. | Ana Ivanovic |
| 19. | Vera Zvonareva |
| 20. | Elena Likhovtseva |
| 21. | Daniela Hantuchova |
| 22. | Dinara Safina |
| 23. | Silvia Farina Elia |
| 24. | Tatiana Golovin |
| 25. | Shinobu Asagoe |
| 26. | Francesca Schiavone |
| 27. | Nicole Vaudusiva |
| 28. | Gila Dulko |
| 29. | Flavia Pennetta |
| 30. | Anna Chakvetadze |
| 31. | Ai Sugiyama |
| 32. | Anna-lena Groenefeld |
|  |  |

## Q. 41

If there are no upsets (a lower seeded player beating a higher seeded player) in the first round, and only match Nos. 6, 7 , and 8 of the second round result in upsets, then who would meet Lindsay Davenport in quarter finals, in case Davenport reaches quarter finals?
(a) Justine Henin
(b) Nadia Petrova
(c) Patty Schnyder
(d) Venus Williams

Ans: d

## Explanation:

There are no upsets in 1st round, so top 16 players go to the 2 nd round.

In second round, nth player would play (17-n)th player. Now, match Nos. 6, 7, and 8 of the second round result in upsets. So the people in the quarter finals would be 1,2,3,4,5,11,10,9.
So in quarterfinal 2nd seeeded player would play (9-2) = 7th position player. Here no. 10 is in the 7th position and No. 10 player is venus williams.
Hence option D.

## Q. 42

If Elena Dementieva and Serena Williams lose in the second round, while Justine Henin and Nadia Petrova make it to the semi-finals, then who would play Maria Sharapova in the quarterfinals, in the event Sharapova reaches quarterfinals?
(a) Dinara Safina
(b) Justine Henin
(c) Nadia Petrova
(d) Patty Schnyder

Ans: c
If Elena Dementieva and Serena Williams lose in the second round, Nadia petrova and patty schnyder will go through. Hence ,in the quarter finals, following seed no. players will be in quarter finals: 1,2,3,4,5,11,7,9.

So, now Maria Sharapova is ranked is 1 so she'll play 9th seed player who is Nadia Petrova. Hence option C.

## Q. 43

If, in the first round, all even numbered matches (and none of the odd numbered ones) result in upsets, and there are no upsets in the second round, then who couldke the lowest seeded player facing Maria Sharapova in semi-finals?
(a) Anastasia Myskina
(b) Flavia Pennetta
(c) Nadia Petrova
(d) Svetlana Kuznetsova

Ans: a

Explanation:
According to given condition, players of following ranking will go to the 2nd round $1,31,3,29,5,27,7,25,9,23,11,21,13,19,15,17$. Out of these players going to 3rd round / quarter finals are $1,15,3,13,5,11,7,9$.

If maria (no.1) goes to semifinal she'll face any on eout of the $13 / 5$ th no. player in semis.
13th seed player is the lowest so Anastasia Myskina.

## Q. 44

If the top eight seeds make it to the quarterfinals, then who, amongst the players listed below, would definitely not play against Maria
Sharapova in the final, in case Sharapova reaches the final?
(a) Amelie Mauresmo
(b) Elena Dementieva
(c) Kim Clijsters
(d) Lindsay Davenport

Ans: c

Explanation:
If the top eight seeds make it to the quarterfinals then one out of Kim Clijsters or svetana kuznetsova will compete with maria sharapoava in semis.

So now if maria reaches semis, she'll beat any one out of the two and both will definitely not play against Maria Sharapova in the final, if she reaches .

## Instructions

Venkat, a stockbroker, invested a part of his money in the stock of four companies - A , B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technology (IT), Auto, and Steel, in no particular order. At the time of investment, the price of each stock was Rs.100. Venkat purchased only one stock of each of these companies. He was expecting returns of $20 \%, 10 \%, 30 \%$,
and $40 \%$ from the stock of companies A, B, C and D, respectively. Returns are defined as the change in the value of the stock after one year, expressed as a percentage of the initial value. During the year, two of these companies announced extraordinarily good results.

One of these two companies belonged to the Cement or the IT industry, while the other one belonged to either the Steel or the Auto industry. As a result, the returns on the stocks of these two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected returns. For the company belonging to the Steel or the Auto industry, the returns on announcement of extraordinarily good results were only one and a half times that of the initially expected returns. For the remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

## Q. 45

What is the minimum average return Venkat would have earned during the year?
(a) $30 \%$
(b) $31.25 \%$
(c) $32.5 \%$
(d) Cannot be determined

## Ans: a

Explanation:

|  | A | B | C | D | AVERAGE |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Before results | 20 | 10 | 30 | 40 | 25 |
| After results | 30 | 20 | 30 | 40 | 30 |

Hence , minimum average return will be $30 \%$

## Q. 46

If Venkat earned a 35\% return on average during the year, then which of these statements would necessarily be true? I. Company A belonged either to Auto or to Steel Industry.
II. Company B did not announce extraordinarily good results. III. Company A announced extraordinarily good results.
IV. Company D did not announce extraordinarily good results.

A I and II only
B II and III only C III and IV only D II and IV only
Ans: B

Explanation:

|  |  | A | B | C | D | Average |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| Before Results |  | 20 | 10 | 30 | 40 | 25 |
| After Results | Case-1 | 40 | 10 | 30 | 60 | 35 |
|  | Case-2 | 30 | 10 | 60 | 40 | 35 |

So to get an average return of $35 \%$, A announced extraordinary results and B did not. Hence, option B is the answer.

## Q. 47

If Venkat earned a $38.75 \%$ return on average during the year, then which of these statement(s) would necessarily be true? I. Company C belonged either to Auto or to Steel Industry.
II. Company D belonged either to Auto or to Steel Industry. III. Company A announced extraordinarily good results.
IV. Company B did not announce extraordinarily good results.

A I and II only
B II and III only C I and IV only D II and IV only Ans: c

Explanation:

|  | A | B | C | D | Average |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Before results | 20 | 10 | 30 | 40 | 25 |
| After results | 20 | 10 | 45 | 80 | 38.75 |

To give 38.75 \% average return we can see that B didnt give extraordinary returns and C can be any of the auto/steel industry.

## Q. 48

If Company C belonged to the Cement or the IT industry and did announce extraordinarily good results, then which of these statement(s) would necessarily be true?
I. Venkat earned not more than $36.25 \%$ return on average. II. Venkat earned not less than $33.75 \%$ return on average.
III. If Venkat earned $33.75 \%$ return on average, Company A announced extraordinarily good results.
IV. If Venkat earned $33.75 \%$ return on average, Company B belonged either to Auto or to Steel Industry.

A I and II only
B II and IV only C II and III only D III and IV only
Ans: b
Explanation:

|  | A | B | C | D | AVERAGE |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Before results | 20 | 10 | 30 | 40 | 25 |
| After results | 20 | 15 | 60 | 40 | 33.75 |

Hence he cannot earn less than $33.75 \%$ average as we consider B(lowest) to give extraordinary results.
Instructions
The year is 2089. Beijing, London, New York, and Paris are in contention to host the 2096 Olympics. The eventual winner is determined through several rounds of voting by members of the IOC with each member representing a different city. All the four cities in contention are also represented in IOC.

| Round | Total Votes Cast | Maximum Votes Cast |  | Eliminated |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | City | No. of Votes | City | No. of Votes |
| 1 |  | London | 30 | New York | 12 |
| 2 | 83 | Paris | 32 | Beijing | 21 |
| 3 | 75 |  |  |  |  |

In any round of voting, the city receiving the lowest number of votes in that round gets eliminated. The survivor after the last round of voting gets to host the event.

A member is allowed to cast votes for at most two different cities in all rounds of voting combined. (Hence, a member becomes ineligible to cast a vote in a given round if both the cities (s)he voted for in earlier rounds are out of contention in that round of voting.)

A member is also ineligible to cast a vote in a round if the city (s)he represents is in contention in that round of voting.
As long as the member is eligible, (s)he must vote and vote for only one candidate city in any
round of voting.The following incomplete table shows the information on cities that received the maximum and minimum votes in different rounds, the number of votes cast in their favour, and the total votes that were cast in those rounds.It is also known that:

All those who voted for London and Paris in round 1, continued to vote for the samecities in subsequent rounds as long as these cities were in contention. $75 \%$ of those whovoted for Beijing in round 1, voted for Beijing in round 2 as well.

Those who voted for New York in round 1, voted either for Beijing or Paris in round 2. The difference in votes cast for the two contending cities in the last round was 1.
$50 \%$ of those who voted for Beijing in round 1, voted for Paris in round 3.

## Q. 49

What percentage of members from among those who voted for New York in round 1, voted for Beijing in round 2 ?
(a) 31.33
(b) 50
(c) 66.67
(d) 75

Ans: d

## Explanation:

Let us consider that there are ' $m$ ' members totally, there are 4 cities so total number of voters in round 1 will be $m-4$, as 4 members of the cities are not allowed to vote.In the same way we have in total m-3 members who will vote in the 2 nd round.For the 3rd round, we have m-2-r members voting, r - number of of voters who voted fornv and Beijing in Round 1 and 2. According to given conditions these voters can't vote again.Also, $\mathrm{m}-3=83$. So in total there were $\mathrm{m}=86$ members. And 83 people voted in 1 st round and it is given that there are 75 votes in 3 rd round . So we have r=9 i.e. 9 voters who voted for Ny in 2 st round and beijing in 2nd round.
Also it is given that Ny voters in Round 1 voted either for Beijing or Paris and there are 9 voters who voted for NY in round 1, voted for
Beijing in round 2.So $9^{*} 100 / 12=75 \%$. hence option D.
Q. 50

What is the number of votes cast for Paris in round 1?
(a) 16
(b) 18
(c) 22
(d) 24

Ans: d

Explanation:

According to given condition $75 \%$ of voters who voted for Beijing in round 1, voted for Beijing in round 2. There are 21-9 = 12 voters who voted for Beijing in round 2 also Beijing in round 1.

Hence total voters for beijing in round 1 is 16 . Son in round 1 total 82 voters, out of which beijing 16 voters,london - 30 , new york -12 . Hence total voters for paris 82-16-30-12 $=24$.

Hence option D.

## Q. 51

What percentage of members from among those who voted for Beijing in round 2 and were eligible to vote in round 3 , voted for London?
(a) 33.33
(b) 38.10
(c) 50
(d) 66.67

Ans: d

Explanation:
From given conditions we find that :

|  | London(l) | Paris(p) | Beijing(b) | NY(n) | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Round1(r1) | 30 | 24 | 16 | 12 | 82 |
| Round2(r2) | 30 | $24(\mathrm{p} \mathrm{r} 1)$ $+3(\mathrm{nr} 1)$ $+4(\mathrm{Br} 1)$ $+1(\mathrm{n}$ - representative $)$ | $\begin{aligned} & 12(\mathrm{br} 1) \\ & +9(\mathrm{n} r 1) \end{aligned}$ | $\vartheta$ |  |
| Round3(r3) | $30+8$ (Beijing r1, r2) | $\begin{gathered} 24(\mathrm{p} \mathrm{r} 1, \mathrm{r} 2) \\ +4(\mathrm{~b} \mathrm{r} 1 ; \mathrm{p} \mathrm{r} 2) \\ +4(\mathrm{~b} \mathrm{r} 1, \mathrm{r} 2) \\ +3(\mathrm{n} \mathrm{r1}, \mathrm{p} \mathrm{r} 2) \\ +1 \text { ( } \mathrm{n} \text {-representative) } \\ +1(\mathrm{~b} \text {-representative) } \end{gathered}$ | $\mathrm{H}_{0}^{N}$ | 0 | 75 |

Required value is $8 * 100 / 12=66.67 \%$. Hence option D.

## Q. 52

Which of the following statements must be true?
a. IOC member from New York must have voted for Paris in round 2. b. IOC member from Beijing voted for London in round 3.
(a) Onlya
(b) Only b
(c) Both a and b
(d) Neither a nor b

Ans: a
Explanation:
From given conditions we find that :

|  | London(l) | Paris(p) | Beijing(b) | NY(n) | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Roundl(r1) | 30 | 24 | 16 | 12 | 82 |
| Round2(r2) | 30 | $\begin{gathered} 24(\mathrm{pr} 1) \\ +3(\mathrm{n} \mathrm{r1}) \\ +4(\mathrm{Br}) \\ +1(\mathrm{n} \text { - } \text { representative }) \\ \hline \end{gathered}$ | $\begin{aligned} & 12(\mathrm{~b} r 1) \\ & +9(\mathrm{n} r 1) \end{aligned}$ |  | 83 |
| Round3(r3) | $30+8$ (Beijing r1, r2) | $\begin{gathered} 24(\mathrm{p} \mathrm{r} 1, \mathrm{r} 2) \\ +4(\mathrm{br} 1 ; \mathrm{p} \mathrm{r} 2) \\ +4(\mathrm{~b} \mathrm{r} 1, \mathrm{r} 2) \\ +3(\mathrm{n} \mathrm{r}, \mathrm{p} \mathrm{r} 2) \end{gathered}$ |  | $\theta$ | $75$ |

We can see that - IOC member from New York must have voted for Paris in round 2.(IOC member representative). Hence a is true. Also we can see that IOC member from Beijing voted for paris in round 3 .Hence b is false. So answer is option A.

Instructions
The table below presents the revenue (in million rupees) of four firms in three states. These firms, Honest Ltd., Aggressive Ltd., Truthful
Ltd. and Profitable Ltd. are disguised in the table as $\mathrm{A}, \mathrm{B}, \mathrm{C}$ and D , in no particular order.

| States | Firm A | Firm B | Firm C | Firm D |
| :---: | :---: | :---: | :---: | :---: |
| U.P | 49 | 82 | 80 | 55 |
| Bihar | 69 | 72 | 70 | 65 |
| M.P | 72 | 63 | 72 | 65 |

Further, it is known that:
In the state of MP, Truthful Ltd. has the highest market share.
Aggressive Ltd.'s aggregate revenue differs from Honest Ltd.'s by Rs. 5 million. Q. 53

What can be said regarding the following two statements? Statement 1: Profitable Ltd. has the lowest share in MP market. Statement 2: Honest Ltd.'s total revenue is more than Profitablè Ltd.

A (a) If Statement 1 is true then Statement 2 is necessarily true.
(b) If Statement 1 is true then Statement 2 is necessarily false.
(c) Both Statement 1 and Statement 2 are true.
(d) Neither Statement 1 nor Statement 2 is true.

Ans: b

Explanation:
We have ,

|  | FIRM A | FIRM B | FIRM C | FIRM D |
| :---: | :---: | :---: | :---: | :---: |
| Total <br> revenue | 190 | 217 | 222 | 185 |

There is a difference of 5 million between Firm A and Firm D and also between Firm C and Firm B. Now if Profitable Ltd. has the lowest share in MP market then Firm B is profitable ltd. Honest ltd. would be any firm out of $A$ and $D$. So now if statement 1 is true then statement 2 is false as honest will have more revenue than profitable. hence option c.

## Q. 54

What can be said regarding the following two statements? Statement 1: Aggressive Ltd.'s lowest revenues are from MP. Statement 2: Honest Ltd.'s lowest revenues are from Bihar.
a(a) If Statement 2 is true then Statement 1 is necessarily false.
(b) If Statement 1 is false then Statement 2 is necessarily true.
(d) If Statement 1 is true then Statement 2 is necessarily true.
(d) None of the above.

Ans: c

Explanation:
We have ,

|  | FIRM A | FIRM B | FIRM C | FIRM D |
| :---: | :---: | :---: | :---: | :---: |
| Total revenue | 190 | 217 | 222 | 185 |

There is a difference of 5 million between Firm A and Firm D and also between Firm C and Firm B. Now if statement 1 is true then, Firm B is aggressive ltd. and Firm C is Honest Ltd. And also statement 2 is fulfilled.
Q. 55

What can be said regarding the following two statements? Statement 1: Honest Ltd. has the highest share in the UP market. Statement 2: Aggressive Ltd. has the highest share in the Bihar market.
(a) Both statements could be true.
(b) At least one of the statements must be true.
(c) At most one of the statements is true.
(d) None of the above.

Ans: c

Explanation:
We have,

|  | FIRM A | FIRM B | FIRM C | FIRM D |
| :---: | :---: | :---: | :---: | :---: |
| Total <br> revenue | 190 | 217 | 222 | 185 |

There is a difference of 5 million between Firm A and Firm D and also between Firm C and Firm B. Now if statement 1 is true then Honest ltd. would be firm B , and aggressive ltd. would be firm C. But now if we consider statement 2 we get Agressive ltd. as firm B and Honest ltd as firm C. Thus any 1 out of the 2 statements can be true and not both together. hence option C .
Q. 56

If Profitable Ltd.'s lowest revenue is from UP, then which of the following is true?
(a) Truthful Ltd.'s lowest revenues are from MP.
(b) Truthful Ltd.'s lowest revenues are from Bihar.
(c) Truthful Ltd.'s lowest revenues are from UP.
(d) No definite conclusion is possible.

Ans: c

Explanation:
We have ,

|  | FIRM A | FIRM B | FIRM C | FIRM D |
| :---: | :---: | :---: | :---: | :---: |
| Total <br> revenue | 190 | 217 | 222 | 185 |

By Statement 1, Truthful is A or C.
If Profitable's lowest revenue are from UP, Profitable is either A or D.
By Statement 2, Honest and Aggressive are either A-D or B-C. As Profitable is either A or D, Honest and Aggressive will be one of B or C. Hence, Truthful is $\mathrm{A}=>$ Profitable is D.

Hence, Truthful's lowest revenues are from UP.
Instructions
Help Distress (HD) is an NGO involved in providing assistance to people suffering from natural disasters. Currently, it has 37 volunteers. They are involved in three projects: Tsunami Relief (TR) in Tamil Nadu, Flood Relief (FR) in Maharashtra, and Earthquake Relief (ER) in Gujarat. Each volunteer working with Help Distress has to be involved in at least one relief work project.

A Maximum number of volunteers are involved in the FR project. Among them, the number of volunteers involved in FR project alone is equal to the volunteers having additional involvement in the ER project.

The number of volunteers involved in the ER project alohe is double the number of volunteers involved in all the three projects.

17 volunteers are involved in the TR project.
The number of volunteers involved in the TR project alone is one less than the number ofvolunteers involved in ER project alone. Ten volunteers involved in the TR project are also involved in at least one more project.
Q. 57

Based on the information given above, the minimum number of volunteers involved in both FR and TR projects, but not in the ER project is:
(a) 1
(b) 3
(c) 4
(d) 5

Ans: c
Explanation:

$\geq 2 x+y+x+y+x+y+z+10-z-x+2 x-1=37$
$\geq 5 x+2 y+9=37$
$\geq 5 x+2 y=28$
Total number of volunteers are 37
Also we know that $3 x+2 y=20$. We get $x=4,=>y=4$

We need to find the minimum value of $6-\mathrm{z}$, and it is given FR get the most number of volunteers, We get that z cannot be more than 2 because if it is 3 or above $E R$ will have the maximum number of volunteers.

## Q. 58

Which of the following additional information would enable to find the exact number of volunteers involved in various projects?

A Twenty volunteers are involved in FR.
B Four volunteers are involved in all the three projects.
C Twenty three volunteers are involved in exactly one project.

D No need for any additional information.
Ans: a

Explanation:
We can get the information mentioned in options B and C using the data given in the passage.
But, we need the information in option A to find the exact number of volunteers in various projects. Hence, option A is the answer.
Q. 59

After some time, the volunteers who were involved in all the three projects were asked to withdraw from one project. As a result, one of the volunteers opted out of the TrRproject, and one opted out of the ER project, while the remaining ones involved in all the three prajects opted out of the FR project. Which of the following statements, then, necessarily follows?
(a) The lowest number of volunteers is now in TR project.
(b) More volunteers are now in FR project as compared to ER project.
(c) More volunteers are now in TR project as compared to ER project.
(d) None of the above.

Ans: b

Explanation:

FR is greater than ER , thus z is $4,5,6$. If $z=4$,
$F R=20$,
ER=18
Ifz $=5$,
$\mathrm{FR}=21, \mathrm{ER}=17$
Ifz $=6$,
$\mathrm{FR}=22, \mathrm{ER}=16$

Now even if we transfer one of the volunteers opted out of the TR project thus he will now be handling FR and ER, and one opted out of the ER project will be handling TR and FR, while the remaining ones involved in all the three projects opted out of the FR project.
The worst-case scenario will be when $z=4$. Now 2 are out of $F R, 1$ from ER and 1 from TR.

$F R=20-2=18$ and $E R=18-1=17$
So we can see that even if volunteers are withdrawn, the number of volunteers in FR are more as in, total if we calculate comes out to be more. Hence option B.
Q. 60

After the withdrawal of volunteers, as indicated in the previous Q ., some new volunteers joined the NGO. Each one of them was allotted only one project in a manner such that, the number of volunteers working in one project alone for each of the three projects became identical. At that point, it was also found that the number of volunteers involved in FR and ER projects was the same as the number of volunteers involved in TR and ER projects. Which of the projects now has the highest number of volunteers:
(a) ER
(b) FR
(c) TR
(d) Cannot be determined

Ans: a

Explanation:
Consider p volunteers be added to TR project and q be added to each of FR and ER projects. Then,
$7+\mathrm{p}=8+q \geq \mathrm{p}=\mathrm{q}+1$

Also, Number of volunteers working on $\mathrm{TR}=7+\mathrm{q}+1+4+5=17+\mathrm{q}$
Number of volunteers working on $\mathrm{FR}=17+\mathrm{q}$
Number of volunteers working on $\mathrm{ER}=18+\mathrm{q}$.
So if we take any values we get ER greater than both FR and TR.

## Verbal

Instructions
A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game.

Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a confliet among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel, reveals the inner conflict of central figures. The superficial adventure story, on the other hand, depictsonly external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western. For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.
Q. 61

According to the passage, internal conflicts are psychologically more interesting than external conflicts because
(a) internal conflicts, rather than external conflicts, form an important component of serious literature as distinguished from less serious genres.
(b) only juveniles or very few "adults" actually experience external conflict, while internal conflict is more widely prevalent in society.
(c) in situations of internal conflict, individuals experience a dilemma in resolving their own preferences for different outcomes.
(d) there are no threats to the reader (or viewer) in case of external conflicts.

Ans:c

Explanation:
Options A,B and D are never mentioned in any part of the passage. Options CSeems to be explaining perfectly why internal conflicts are psychologically more interesting than external conflicts.
Q. 62

Which, according to the author, would qualify as interesting psychology?
(a) A statistician's dilemma over choosing the best method to solve an optimisation problem.
(b) A chess player's predicament over adopting a defensive strategy against an aggressive opponent.
(c) A mountaineer's choice of the best path to Mt. Everest from the base camp.
(d) A finance manager's quandary over the best way of raising money from the market.

Ans: b

Explanation:
By adopting a defensive strategy, the chess player is co-operating with his opponent though he wants to win the game. In the beginning of the passage, it has been given that conflict of interests like these lead to interesting psychology. In the other 3 options given, there is no conflict of interest involved (Only one person is involved in all the other 3 cases).
Q. 63

According to the passage, which of the following options about the application of game theory to a conflict-of-interest situation is true?
(a) Assuming that the rank order of preferences for options is different for different players.
(b) Accepting that the interests of different players are often in conflict.
(c) Not assuming that the interests are in complete disagreement.
(d) All of the above.

Ans: d

Explanation:
In the 1 st paragraph, the last 3 lines indicate that the options A and B are true. In the $2 n d$ paragraph, the first 2 lines indicate that the option $C$ is true.

Hence, all the above is the answer.

## Q. 64

The problem solving process of a scientist is different from that of a detective because
(a) scientists study inanimate objects, while detectives deal with living criminals or law offenders.
(b) scientists study known objects, while detectives have to deal with unknown criminals or lawoffenders.
(c) scientists study phenomena that are not actively altered, while detectives deal with phenomenathat have been deliberately influenced to mislead.
(d) scientists study psychologically interesting phenomena, while detectives deal with "adult"analogues of juvenile adventure tales.

Ans: c

Explanation:
Refer to the lines of 2nd last para.
The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

Option C agrees with these lines and none of the other options does. Hence, option C is the answer.

## Instructions

The sentences given in the Q., when properly sequenced, form a coherent paragraph. Each sentence is labeled with a letter. Choose the most logical order of sentences from among the given choices to construct a coherent paragraph.
Q. 65

The sentences given in each Q., when properly sequenced, form a coherent paragraph. Each sentence is labeled with a letter. Choose the most logical order of sentences from among the given choices to construct a coherent paragraph.
(a) Similarly, turning to caste, even though being lower caste is undoubtedly a separate cause of disparity, its impact is all the greater when the lower-caste families also happen to be poor.
(b) Belonging to a privileged class can help a woman to overcome many barriers that obstruct women from less thriving classes.
(c) It is the interactive presence of these two kinds of deprivation - being low class and being female - that massively impoverishes women from the less privileged classes.
(d) A congruence of class deprivation and gender discrimination can blight the lives of poorer women very severely. (E) Gender is certainly a contributor to societal inequality, but it does not act independently of class.
(a) EABDC
(b) EBDCA
(c) DAEBC
(d) BECDA

Ans: b

Explanation:
EB pair is clearly a link as E says inequality is dependent on class and B takes it forward. Thus we have option B and option C. Out of these link DCA is in logical sequence. Hence option B.
Q. 66
(A) When identity is thus 'defined by contrast', divergence with the West becomes central.
(B) Indian religious literature such as the Bhagavad Gita or the Tantric texts, which are identified as differing from secular writings seen as 'western', elicits much greater interest in the West than do other Indian writings, including India's long history of heterodoxy.
(C) There is a similar neglect of Indian writing on non-religious subjects, from mathematics, epistemology and natural science to economics and linguistics.
(D) Through selective emphasis that point up differences with the West, other civilizations can, in this way, be redefined in alien terms, which can be exotic and charming, or else bizarre and terrifying, or simply strange and engaging.
(E) The exception is the Kamasutra in which western readers have managed to cultivate an interest.
(a) BDACE
(b) DEABC
(c) BDECA
(d) BCEDA

Ans: d

Explanation:
Out of $B$ and $D, B$ is a perfect starting sentence. Also there is a link among sentences $B C E$ as $C$
explains how there is a neglect in Indian writing in not just religious topics but also in nonreligious subjects and E gives exception to above 2 sentences. Only option D follows the requirement.

Instructions
For the following Questions answer them individually
Q. 67

The sentences given in each Q., when properly sequenced, form a coherent paragraph. Each sentence is labeled with a letter. Choose the most logical order of sentences from among the given choices to construct a coherent paragraph.
A) This is now orthodoxy to which I subscribe - up to a point. B) It emerged from the mathematics of chance and statistics. C) Therefore the risk is measurable and manageable.
D) The fundamental concept: Prices are not predictable, but the mathematical laws of chance can describe their fluctuations. E) This is how what business schools now call modern finance was born.
(a) ADCBE
(b) EBDCA
(c) ABDCE
(d) DCBEA

Ans: b

Explanation:
Here finding the starting statement is a problem. So we first find link among the given statements. From statement B we can see the Word 'it', so it must refer to some statement before. From statement E we can see that 'it' refers to modern finance. Out of other statements, correct order is DCA ,as A concludes. Hence , option B.
Q. 68

Choose the option in which the usage of the word is incorrect or inappropriate. "Near"
(a) I got there just after you left - a near miss!
(b) She and her near friend left early.
(c) The war led to a near doubling of oil prices.
(d) They came near to tears seeing the plight of the victims.

Ans: b

Explanation:
The correct word in option B is "close friend". The usage of "near" is not appropriate here. Hence, option B is the answer.

## Q. 69

Choose the option in which the usage of the word is incorrect or inappropriate. "Hand"
[CAT 2005]
(a) I have my hand full, I cannot do it today.
(b) The minister visited the jail to see the breach at first hand.
(c) The situation is getting out of hand here!
(d) When the roof of my house was blown away, he was willing to lend me a hand.

Ans: a

Explanation:
Sentence A is incorrect. The correct usage is 'I have my hands full'.
Q. 70

Choose the option in which the usage of the word is incorrect or inappropriate. "For"
(a) He has a great eye for detail.
(b) We are waiting for the day.
(c) I can't bear for her to be angry.
(d) It couldn't be done for ever.

Ans: d

Explanation:
In statements $A, B$ and $C$ 'for' is correctly used. However in statement D, there shouldn't be any space between for and ever. Correct statement is 'It couldn't be done forever'.

Instructions
Crinoline and croquet are out. As yet, no political activists have thrown themselves in front of the royal horse on Derby Day. Even so, some historians can spot the parallels. It is a time of rapid technological change. It is a period when the dominance of the world's superpower is coming under threat. It is an epoch when prosperity masks underlying economic strain. And, crucially, it is a time when policy-makers are confident that all is for the best in the best of all possible worlds. Welcome to the Edwardian Summer of the second age of globalisation. Spare a moment to take stock of what's been happening in the past few months. Let's start with the oil price, which has rocketed to more than $\$ 65$ a barrel, more than double its level 18 months ago. The accepted wisdom is that we shouldn't worry our little heads about that, because the incentives are there for business to build new production and refining capacity, which will
effortlessly bring demand and supply back into balance and bring crude prices back to $\$ 25$ a barrel. As Tommy Cooper used to say, 'just like that'. Then there is the result of the French referendum on the European Constitution, seen as thick-headed luddites railing vainly against the modern world. What the French needed to realise, the argument went, was that there was no alternative to the reforms that would make the country more flexible, more competitive, more
dynamic. Just the sort of reforms that allowed Gate Gourmet to sack hundreds of its staff at Heathrow after the sort of ultimatum that used to be handed out by Victorian mill owners. An alternative way of looking at the French "non" is that our neighbours translate "flexibility" as "you're fired". Finally, take a squint at the United States. Just like Britain a century ago, a period of unQ.ed superiority is drawing to a close. China is still a long way from matching America's wealth, but it is growing at a stupendous rate and economic strength brings geo-political clout. Already, there is evidence of a new scramble for Africa as Washington and Beijing compete for oil stocks. Moreover, beneath the surface of the US economy, all is not well. Growth looks healthy enough, but the competition from China and elsewhere has meant the world's biggest economy now imports far
more than it exports. The US is living beyond its means, but in this time of studied complacency a current account deficit worth 6 percent of gross domestic product is seen as a sign of strength, not weakness. In this new Edwardian summer, comfort is taken from the fact that dearer oil has not had the savage inflationary consequences of 1973-74, when a fourfold increase in the cost of crude brought an abrupt end to a postwar boom that had gone on uninterrupted for a quarter of a century. True, the cost of living has been affected by higher transport costs, but we are talking of inflation at b) 3 per cent and not 27 per cent. Yet the idea that higher oil prices are of little consequence is fanciful. If people are paying more to fill up their cars it leaves them with less to spend on everything else, but there is a reluctance to consume less. In the 1970 spunions were strong and able to negotiate large, compensatory pay deals that served to
intensify inflationary pressure. In 2005, that avenue is pretty much closed off, but the abolition of all the controls on credit that existed in the 1970s means that households are invited to borrow more rather than consume less. The knock-on effects of higher oil prices are thus felt in different ways - through high levels of indebtedness, in inflated asset prices, and in balance of payments deficits.

There are those who point out, rightly, that modern industrial capitalism has proved mightily resilient these past 250 years, and that a sign of the enduring strength of the system has been the way it apparently shrugged off everything - a stock market crash, $9 / 11$, rising oil prices - that have been thrown at it in the half decade since the millennium. Even so, there are at least three reasons for concern. First, we have been here before. In terms of political economy, the first era of globalisation mirrored our own. There was a belief in unfettered capital flows, in free trade, and in the power of the market. It was a time of massive income inequality and unprecedented migration. Eventually, though, there was a backlash, manifested in a struggle between free traders and protectionists, and in rising labour militancy. Second, the world is traditionally at its most fragile at times when the global balance of power is in flux. By the end of the nineteenth century, Britain's role as the hegemonic power was being challenged by the rise of the United States, Germany, and Japan while the Ottoman and Hapsburg empires were clearly in rapid decline. Looking ahead from 2005, it is clear that over the next two or three decades, both China and India - which together account for half the world's population - will flex their muscles. Finally, there is the Question of what rising oil prices tell us. The emergence of China and India means global demand for crude is likely to remain high at a time when experts say production is about to top out. If supply constraints start to bite, any declines in the price are likely to be shortterm cyclical affairs punctuating a long upward trend.

By the expression 'Edwardian Summer', the author refers to a period in which there is
(a) unparalleled luxury and opulence.
(b) a sense of complacency among people because of all-round prosperity.
(c) a culmination of all-round economic prosperity.
(d) an imminent danger lurking behind economic prosperity.

Ans: b

Explanation:
The author talks about the complacency of people due to economic prosperity in the 1st para. Hence the answer is B

## Q. 72

What, according to the author, has resulted in a widespread belief in the resilience of modern capitalism?
(a) Growth in the economies of Western countries despite shocks in the form of increase in levels of indebtedness and inflated asset prices.
(b) Increase in the prosperity of Western countries and China despite rising gil prices.
(c) Continued growth of Western economies despite a rise in terrorism, an increase in oil prices and other similar shocks.
(d) The success of continued reforms aimed at making Western economies more dynamic, competitive and efficient.

Ans:c
Explanation:
Refer to the lines:
There are those who point out, rightly, that modern industrial capitalism has proved mightily resilient these past 250 years, and that a sign of the enduring strength of the system has been the way it apparently shrugged off everything - a stock market crash, $9 / 11$, rising oil prices - that have been thrown at it in the half decade since the millennium

Option C is a gist of these reasons. Hence, option C is the answer.

## Q. 73

Which of the following best represents the key argument made by the author?
(a) The rise in oil prices, the flux in the global balance of power and historical precedents should make us Q. our belief that the global economic prosperity would continue.
(b) The belief that modern industrial capitalism is highly resilient and capable of overcoming shocks will be belied soon.
(c) Widespread prosperity leads to neglect of early signs of underlying economic weakness, manifested in higher oil prices and a flux in the global balance of power.
(d) A crisis is imminent in the West given the growth of countries like China and India and the increase in oil prices. 10

Ans: a

Explanation:
Options B and C are negated as the author does not support any of these.
Option D is incorrect as the author does not say that the crisis is imminent in the west. Option A is correct as the author has made arguments in its support.

## Q. 74

What can be inferred about the author's view when he states, 'As Tommy Cooper used to say "just like that"'?
(a) Industry has incentive to build new production and refining capacity and therefore oil prices would reduce.
(b) There would be a correction in the price levels of oil once new production capacity is added.
(c) The decline in oil prices is likely to be short-term in nature.
(d) It is not necessary that oil prices would go down to earlier levels.

Ans: d

Explanation:
The author has sarcastically written this line. The main argument of the author is "It is a period when the dominance of the world's superpower is coming under threat. It is an epoch when prosperity masks underlying economic strain. And, crucially, it is a time when policy-makers are confident that all is for the best in the best of all possible worlds." Author don't agree with the arguments, thus he has provided others views for the following as oil prices is likely to come down due to market incentives.

Tommy Cooper's argument was that the oil price would go down once the correction takes place.
But the author has made arguments throughout the passage that it might not happen soon. Instructions

While complex in the extreme, Derrida's work has proven to be a particularly influential approach to the analysis of the ways in which language structures our understanding of ourselves and the world we inhabit, an approach he termed deconstruction. In its simplest formulation, deconstruction can be taken to refer to a methodological strategy which seeks to uncover layers of hidden meaning in a text that have been denied or suppressed. The term 'text', in this respect, does not refer simply to a written form of communication, however. Rather, texts are something we all produce and reproduce constantly in our everyday social relations, be they spoken, written or embedded in the construction of material artifacts. At the heart of Derrida's deconstructive approach is his critique of what he perceives to be the totalitarian impulse of the Enlightenment pursuit to bring all that exists in the world under the domain of a representative language, a
pursuit he refers to as logocentrism. Logocentrism is the search for a rational language that is able to know and represent the world and all its aspects perfectly and accurately. Its totalitarian dimension, for Derrida at least, lies primarily in its tendency to marginalize or dismiss all that does not neatly comply with its particular linguistic representations, a tendency that, throughout history, has all too frequently been manifested in the form of authoritarian institutions. Thus logocentrism has, in its search for the truth of absolute representation, subsumed difference and oppressed that which it designates as its alien 'other'. For Derrida, western civilization has been built upon such a systematic assault on alien cultures and ways of life, typically in the name of reason and progress.
In response to logocentrism, deconstruction posits the idea that the mechanism by which this process of marginalization and the ordering of truth occurs is through establishing systems of binary opposition. Oppositional linguistic dualisms, such as rational/irrational, culture/nature and good/bad are not, however, construed as equal partners as they are in, say, the semiological structuralism of Saussure. Rather, they exist, for Derrida, in a series of hierarchical relationships with the first term normally occupying a superior position. Derrida defines the relationship between such oppositional terms using the neologism différance. This refers to the realization that in any statement, oppositional terms differ from each other (for instance, the difference between rationality and irrationality is constructed through oppositional usage), and at the same time, a hierarchical relationship is maintained by the deference of one term to the other (in the positing of rationality over irrationality, for instance). It is this latter point which is perhaps the key to understanding Derrida's approach to deconstruction.

For the fact that at any given time one term must defer to its oppositional 'other', means that the two terms are constantly in a state of interdependence. The presence of one is dependent upon the absence or 'absent-presence' of the 'other', such as in thecase of good and evil, whereby to understand the nature of one, we must constantly relate itto the absent term in order to grasp its meaning. That is, to do good, we must understand that our act is not evil for without that comparison the term becomes meaningless. Put simply, deconstruction represents an attempt to demonstrate the absent-presence of this oppositional 'other', to show that what we say or write is in itself not expressive simply of what is present, but also of what is absent. Thus, deconstruction seeks to reveal the interdependence of apparently dichotomous terms and their meanings relative to their textual context; that is, within the linguistic power relations which structure dichotomous terms hierarchically. In Derrida's own words, a deconstructive reading "must always aim at a certain relationship, unperceived by the writer, between what he commands and what he does not command of the patterns of a language that he uses. ... [It] attempts to make the not-seen accessible to sight."

Meaning, then, is never fixed or stable, whatever the intention of the author of a text. For Derrida, language is a system of relations that are dynamic, in that all meanings we ascribe to the world are dependent not only on what we believe to be present but also on what is absent. Thus, any act of interpretation must refer not only to what the author of a text intends, but also to what is absent from his or her intention. This insight leads, once again, to Derrida's further rejection of the idea of the definitive authority of the intentional agent or subject. The subject is decentred; it is conceived as the outcome of relations of différance. As author of its own biography, the subject thus becomes the ideological fiction of modernity and its logocentric philosophy, one that depends upon the formation of hierarchical dualisms, which repress and deny the presence of the absent 'other'. No meaning can, therefore, ever be definitive, but is merely an outcome of a
particular interpretation.
Q. 75

According to the passage, Derrida believes that:
(a) Reality can be construed only through the use of rational analysis.
(b) Language limits our construction of reality.
(c) A universal language will facilitate a common understanding of reality.
(d) We need to uncover the hidden meaning in a system of relations expressed by language.

Ans: D

Explanation:
From the starting part of the passage we have '..can be taken to refer to a methodological strategy which seeks to uncover layers of hidden meaning in a text that have been denied or suppressed..' Hence option D is the correct answer.

## Q. 76

To Derrida, 'logocentrism' does not imply:
(a) A totalitarian impulse.
(b) A domain of representative language.
(c) Interdependence of the meanings of dichotomous terms.
(d) A strategy that seeks to suppress hidden meanings in a text.

Ans: c

Explanation:
In the lines "Logocentrism is the search for a rational language that is able to know and represent the world and ............. establishing systems of binary opposition", Derrida has mentioned three charecteristics of logocentrism, which are options A, B and D.

Only option C is not mentioned and is hence the answer.
Q. 77

According to the passage, Derrida believes that the system of binary opposition
(a) represents a prioritization or hierarchy.
(b) reconciles contradictions and dualities.
(c) weakens the process of marginalization and ordering of truth.
(d) deconstructs reality.

Ans: a

Explanation:

From the part of passage where the following sentence occurs ' ... they exist, for Derrida, in a series of hierarchical relationships with the first term normally occupying a superior position..' we can infer that option $A$ is correct option.

## Q. 78

Derrida rejects the idea of 'definitive authority of the subject' because
(a) interpretation of the text may not make the unseen visible.
(b) the meaning of the text is based on binary opposites.
(c) the implicit power relationship is often ignored.
(d) any act of interpretation must refer to what the author intends.

Ans: a

## Explanation:

From the following sentences ' ... refer not only to what the author of a text intends, but also to what is absent from his or her intention. This insight leads, once again, to Derrida's further rejection of the idea of the definitive authority..' we can make out that option A is the reason why Derrida rejects the idea of 'definitive authority of the subject'.

Instructions
For the following Q.s answer them individually

## Q. 79

From the given options, choose the one that completes the paragraph in the most appropriate way.
The audiences for crosswords and sudoku, understandably, overlap greatly, but there are differences, too. A crossword attracts a more literary person, while sudoku appeals to a keenly logical mind. Some crossword enthusiasts turn up their noses at sudoku because they feel it lacks depth. A good crossword requires vocabulary, knowledge, mental flexibility and sometimes even a sense of humor to complete. It touches numerous areas of life and provides an "Aha!" or two along the way.
(a) Sudoku, on the other hand, is just a logical exercise, each one similar to the last.
(b) Sudoku, incidentally, is growing faster in popularity than crosswords, even among the literati.
(c) Sudoku, on the other hand, can be attempted and enjoyed even by children.
(d) Sudoku, however, is not exciting in any sense of the term.

Ans: a

Explanation:
The last line of the paragraph should talk about Sudoku and the description should be in contrast to the description of Crossword. a)
captures this the best way.

## Q. 80

From the given options, choose the one that completes the paragraph in the most appropriate way.
Most firms consider expert individuals to be too elitist, temperamental, egocentric, and difficult to work with. Force such people to collaborate on a high-stakes project and they just might come to fisticuffs. Even the very notion of managing such a group seems unimaginable. So most organizations fall into default mode, setting up project teams of people who get along nicely.
(a) The result, however, is disastrous.
(b) The result is mediocrity.
(c) The result is creation of experts who then become elitists.
(d) Naturally, they drive innovations.

Ans: b
Explanation:
The last sentence should talk about the result of forming such a team.
And from the flow of the paragraph, it is clear that such a result will be mediocre. So, the best concluding sentence is $b$.

## Q. 81

From the given options, choose the one that completes the paragraph in the most appropriate way. Federer's fifth grand slam win prompted a reporter to ask whether he was the best ever. Federer is certainly not lacking in confidence, but he wasn't about to proclaim himself the best ever. "The best player of this generation, yes", he said, "But nowhere close to ever. Just look at the records that some guys have. I'm a minnow."
(a) His win against Agassi, a genius from the previous generation, contradicts that.
(b) Sampras, the king of an earlier generation, was as humble.
(c) He is more than a minnow to his contemporaries.
(d) The difference between 'the best of this generation' and 'the best ever' is a matter of perception.

Ans:c
Explanation:
We must select that sentence that follows the line of thought presented in the passage.
The author talks about the Q. asked by the reporter to Federer. Federer says that he was the best player of his generation but not even close to all-time best. He says that compared to "some guys" he is a minnow. So, the concluding line must be related to his answer.

Now, let's check each of the options. Agassi might not be one of the "some guys" that Federer referred to in his statement and hence, the concluding sentence cannot be option A. Moreover, the win against Agassi does not prove that he is an all-time best tennis player. So, option A is wrong.

Option B is clearly out of scope as Sampras was not mentioned anywhere in the given passage. Option C says that Federer is more than a minnow to his contemporaries. This sentence extends the idea given in the previous sentence and hence is in line with rest of the passage. Also, this line concludes the paragraph perfectly. Hence, sentence $C$ could be the answer.

Option D is definitely related to the paragraph, but is not related to the Q . posed by the reporter. Between options C and D, option C
fits better because it is more related to the Q . posed by the reporter and the answer given by
Federer. Hence, option C is the answer.

## Q. 82

From the given options, choose the one that completes the paragraph in the most appropriate way. Thus the end of knowledge and the closing of the frontier that it symbolizes is not a looming crisis at all, but merely one of many embarrassing fits of hubris in civilization's long industry. In the end, it will pass away and be forgotten. Ours is not the first generation to struggle to understand the organizational laws of the frontier, deceive itself that it has succeeded, and go to its grave having failed.
(a) One would be wise to be humble.
(b) But we might be the first generation to actually reach the frontier.
(c) But we might be the first generation to deal with the crisis.
(d) However, this time the success is not illusory. Ans: a

Explanation:
The paragraph says that it is not a crisis. So, option c) is wrong. Also, the frontier has not been reached and the it is not a success story. So, options b) and d) are also incorrect concluding statements. The best concluding sentence is a).

## Q. 83

Some sentences are grammatically incorrect or inappropriate. Select the option that indicates the grammatically correct and appropriate sentence(s).
A. When virtuoso teams begin their work, individuals are in and group consensus is out.
B. As project progresses, however, the individual stars harness themselves to the product of the group.
C. Sooner or later, the members break through their own egocentrism and become a plurality with single-minded focus on the goal. D. In short, they morph into a powerful team with a shared identity.
(a) $\mathrm{A} \& \mathrm{C}$
(b) A\&D
(c) $\mathrm{B} \& \mathrm{D}$
(d) $A, C \& D$

Ans:b

Explanation:
Statement B should be: "As the project progresses..."
Statement C should be:"...a plurality with a single-minded focus..." Statements A and D are correct. Option b)

## Q. 84

Some sentences are grammatically incorrect or inappropriate. Select the option that indicates the grammatically correct and appropriate sentence(s).
A. Large reductions in the ozone layer, which sits about 15-30 km above the Earth, take place each winter over the polar regions, especially the Antarctic, as low temperatures allow the formation of stratospheric clouds that assist chemical reactions breaking down ozone.
B. Industrial chemicals containing chlorine and bromine have been blamed for thinning the layer because they attack the ozone molecules, making them to break apart.
C. Many an offending chemicals have now been banned.
D. It will still take several decades before these substances have disappeared from the atmosphere.
(a) D
(b) $\mathrm{B} \& \mathrm{D}$
(c) $\mathrm{A} \& \mathrm{D}$
(d) $\mathrm{A} \& \mathrm{C}$

Ans: c

Explanation:
Statements A and D are correct.
Statement B should be "...making them break apart".
Statement C should be "...many an offending chemical.." or "many offending chemicals"
Q. 85

Some sentences are grammatically incorrect or inappropriate. Select the option that indicates the grammatically correct and appropriate sentence(s).
A. The balance of power will shift to the East as China and India evolve.
B. Rarely the economic ascent of two still relatively poor nations has been watched with such a mixture of awe, opportunism, and trepidation.
C. Postwar era witnessed economic miracles in Japan and South Korea, but neither was populous enough to power worldwide growth or change the game in a complete spectrum of industries.
D. China and India, by contrast, possess the weight and dynamism to transform the 21st-century global economy.
(a) $\mathrm{A}, \mathrm{B} \& \mathrm{C}$
(b) $\mathrm{A} \& \mathrm{D}$
(c) C
(d) $\mathrm{C} \& \mathrm{D}$

Ans: B

Explanation:
Statements B and C are incorrect.
Statement B should be "Rarely has the economic...been watched". Statement C should be "The post war era".
Hence option b) is the correct answer.

## Q. 86

Some sentences are grammatically incorrect or inappropriate. Select the option that indicates the grammatically correct and appropriate sentence(s).
A. People have good reason to care about the welfare of animals.
B. Ever since Enlightenment, their treatment has been seen as a measure of mankind's humanity.
C. It is no coincidence that William Wilberforce and Sir Thomas Foxwell Buxton, two leaders of the movement to abolish the slave trade, helped found the Royal Society for the Prevention of Cruelty to Animals in 1820 s.
D. An increasing number of people go further: mankind has a duty not tocause pain to animals that have the capacity to suffer.
(a) $A \& D$
(b) B
(c) $\mathrm{A} \& \mathrm{C}$
(d) $C \& D$

Ans: a

Explanation:
Statements A and D are correct.
Statement B should be "Ever since the Enlightenment..." Statement C should be "...in the 1820s" Hence, option a) is the correct answer.
Q. 87

The following Q . has a paragraph with one italicized word that does not make sense. Choose the most appropriate replacement for that word from the options given below the paragraph.

Intelligent design derives from an early 19th-century explanation of the natural world given by an English clergyman, William Paley. Paley was the populariser of the famous watchmaker analogy. Proponents of intelligent design are crupping Paley's argument with a new gloss from molecular biology.
(a) destroying
(b) testing
(c) resurrecting
(d) Q.ing

## Ans:c

Explanation:
The key word mentioned in this paragraph is "Proponents." Proponents of some theory will always try to revive that theory. hence option c is correct. Resurrect means to revive. Option a,b,d are negative opinions and are irrelevant

## Q. 88

The following Q. has a paragraph with one italicized word that does not make sense. Choose the most appropriate replacement for that word from the options given below the paragraph.

Women squat, heads covered, beside huge piles of limp fodder and blunk oil lamps, and just about all the cows in the three towns converge upon this spot. Sinners, supplicants and yes, even scallywags hand over a few coins for a crack at redemption and a handful of grass.
(a) shining
(b) bright
(c) sputtering
(d) effulgent

Ans:c
Explanation:
If you carefully observe the passage, the ideas described are sad and pale. Hence sputtering is the most appropriate word as
"Sputtering" means the light of flame which is dying out. Rest of the options are synonym to bright and shiny.
Q. 89

The following Q . has a paragraph with one italicized word that does not make sense. Choose the most appropriate replacement for that word from the options given below the paragraph.

It is kiang to a sensitive traveler who walks through this great town, when he sees the streets, the roads, and cabin doors crowded with beggars, mostly women, followed by three, four, or six children, all in rags and importuning every passenger for alms.
(a) amusing
(b) irritating
(c) disgusting
(d) distressing

Ans: d

Explanation:
In this paragraph, the key word is sensitive. Sensitive is especially mentioned in this paragraph. Therefore distressing is the most appropriate word. Sensitive persons feel distressed on seeing a grim situation.

## Q. 90

The following Q . has a paragraph with one italicized word that does not make sense. Choose the most appropriate replacement for that word from the options given below the paragraph.

Or there is the most fingummy diplomatic note on record: when Philip of Macedon wrote to the Spartans that, if he came within their borders, he would leave not one stone of their city, they wrote back the one word - "If".
(a) witty
(b) rude
(c) simple
(d) terse

## Ans: d

Explanation:
Since the answer to the letter is just a single letter "if", it means the reply is terse. "Terse" means "to use less words to convey your idea."
